

THE NATURAL POOL OF PINARBAŞI İLİCA FALLS

It is located within Pınarbaşı's İlica Village, has 12 km. distance from the province. From İlica Village, the pathway takes about half an hour.

The water falls from about 10 km. height and a pool generated from the falling point of the stream. The most important aspect of this fall is that the natural pool is surrounded by numerous trees and plants. Again if the road from the top parts of the fall was taken, the concavities and carvings of the water generated on the rocks throughout the years has given the city a different beauty.
